

hypha MESH

**Anytime,
anywhere
connectivity.**

Decentralised, IP-transparent mesh networking.

HyphaMESH enables you to create a secure pop-up mesh network in minutes – extending your Wi-Fi coverage and on-the-ground visibility in remote areas. Increase connectivity by kilometres into any environment.

Connectivity.

Leverage resilient COFDM mesh and Wi-Fi technologies to connect in areas with no traditional network coverage.

Usability.

Deploy rapidly with rugged fixed and portable mesh devices that require minimal training and no fixed infrastructure.

Flexibility.

Connect your preferred devices, sensors and cameras as you would on any Wi-Fi network for real-time data sharings.

Voice and Data **Beyond** Networks

hypha MESH

Boundless reach in the field.

Each HyphaMESH device 'breadcrumbs' off another within the self-forming and self-healing network to access Wi-Fi up to 2 km from your wireless hub. Operate independently or integrate back into a wider network or the internet.

hypha MESH : LITE

For vehicle and drone mounting or set-up in buildings.

hypha MESH : NODE (2W & 10W)

For vehicle and base camp installation.

hypha MESH : GO

For rugged handheld use and portability on the front line.

hypha MESH : TALK

For teams that also need integrated push-to-talk.
